PROFESSIONAL SUMMARY

Experience developing web and mobile applications using technologies such as Java, Next.js, Flutter, and Node.js. Skilled in analysis, programming, database management, and team collaboration. Passionate about programming and continuous improvement, applying engineering principles such as algorithm optimization, resource management, and the design of scalable systems. Committed to delivering solutions that streamline processes, automate operations, and generate real value for organizations.

WORK EXPERIENCE

❖ Developer
Fundación Universitaria Colombo Internacional (UNICOLOMBO) | Feb. 2023 – Jun. 2024

- I was part in the development of a web application for managing academic projects, using Java, PrimeFaces, and XHTML.
- Implemented version control with Git and GitHub, ensuring proper collaborative code integration.
- Contributed to the design and implementation of the front-end and back-end, applying best practices and agile methodologies.

❖ Sales Agent
Consumer Sales Services | Dic. 2024 – Abr. 2025

- Applied problem-solving and user-oriented techniques transferable to technical support.
- Achieved monthly sales targets, strengthening interpersonal and time management skills.
- Developed effective communication and customer service skills in English and Spanish.

LANGUAGES

Spanish – Native

English – Advanced (C1 Aptis)

EDUCATION

- Bachelor's Degree in Systems Engineering
  Fundación universitaria colombo internacional
  February 2023 - Currently
- Associate Degree in Information Systems and Software Development
  Fundación universitaria colombo internacional
  February 2020 – November 2022

RELEVANT PROYECTS

❖ Chatbot for Tourism in Bolívar - Colombia

August 2025 – Currently

- Create an interactive chatbot to provide tourist information in Cartagena.
- Implement the Chatbot logic using the Gemini API and Flutter (Dart).
- Design the database in Node.js to store information about monuments and events.
- Promote a sustainable approach by reducing the need for printed guides and centralizing tourist information.

❖ Management System for Automotive Workshops

February 2024 - June 2024

- Design a web application to manage the internal operations of automotive workshops.
- Develop business logic using PHP and MySQL as a database.
- Optimize SQL queries to improve system performance.
- Use Git and GitHub for version control and team code integration.

CERTIFICATIONS AND COURSES

❖ Full Stack Web Development

Academlo | Sep. 2025

- During this specialization, I gained practical experience in Full Stack development using React and Next.js on the front end, and Node.js with Express on the back end. I learned to structure complete projects from interface design to API creation and consumption, managing databases and implementing version control with Git and GitHub.

❖ Supervised Machine Learning: Regression and Classification

Stanford Online (Coursera) | Mar. 2023

- This course, offered by Stanford Online through Coursera, allowed me to strengthen my knowledge in supervised machine learning, understanding the fundamentals of regression, classification and evaluation of predictive models.
- I learned to apply machine learning algorithms in real-world contexts, interpret performance metrics, and develop a deeper understanding of how AI models can support decision-making in software development and data analysis.

SKILLS

- Logical and structured thinking for technical decision-making.
- Ability to adapt to new technologies and business environments.
- Systems integration and database management.
- Design and optimization of algorithms for efficient problem-solving.
- Requirements analysis and business-oriented system modeling.
- Knowledge of operating systems and resource management (memory, processes, concurrency).
- Design of scalable and adaptable solutions for different environments.
- Focus on process automation and continuous improvement.
